Name	Company / school contact information	Mobile phone	Email address	Blood type

September 2026

Prepare things to bring in an emergency and goods to store.

According to the number of your family members, prepare the minimum necessary emergency items in a backpack so that you can take them with you at any time.
Also, in order to support yourselves after a disaster, prepare water, food, daily necessities, and other stockpiles for seven days (or at least three days) for each of your family members.

Things to bring in an emergency

Things to bring with you when evacuating

Daily necessities
- ☐ Portable radio
- ☐ Flashlight
- ☐ Extra batteries
- ☐ Water bottle
- ☐ Paper cup
- ☐ Paper plate
- ☐ Disposable chopsticks
- ☐ Can opener
- ☐ Utility knife
- ☐ Plastic bottle

Emergency medical goods
- ☐ Adhesive plasters
- ☐ Bandages
- ☐ Antiseptic solution
- ☐ Ointment
- ☐ Cold medicine
- ☐ Anti-inflammatory plaster/poultice
- ☐ Digestive medicine
- ☐ Drugs for chronic diseases

Emergency food
- ☐ Drinking water
- ☐ Canned food
- ☐ Cooked packaged rice
- ☐ Crackers/hard biscuits
- ☐ Pre-packaged food

Valuables
- ☐ Cash (including small change)
- ☐ Bank passbook
- ☐ Seal
- ☐ House / car keys
- ☐ Various cards
- ☐ Mobile phone
- ☐ Driver's license
- ☐ My Number Card or Health Insurance Eligibility Certificate

Others (as needed)
- ☐ Extra clothes
- ☐ Towels
- ☐ Spare glasses
- ☐ Plastic wrap
- ☐ Wet wipes
- ☐ Plastic bags
- ☐ Rain gear
- ☐ Prescription record
- ☐ Mother and child health handbook
- ☐ Infant formula
- ☐ Baby bottle
- ☐ Disposable diapers
- ☐ Sanitary items
- ☐ Lighter
- ☐ Work gloves
- ☐ Face mask
- ☐ Pocket warmers
- ☐ Writing materials
- ☐ Whistle
- ☐ Address book with contact information
- ☐ Spare battery for mobile phones
- ☐ Helmet / disaster prevention hood

Goods to store

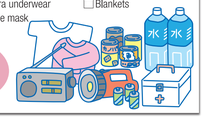

Things to prepare for several days (minimum three days, preferably seven days) until recovery

Daily necessities
- ☐ Newspapers
- ☐ Toilet articles
- ☐ Bucket
- ☐ Paper tableware
- ☐ Portable gas stove (and fuel)
- ☐ Lighter
- ☐ Hooded raincoat
- ☐ Sewing set
- ☐ Soap
- ☐ Sanitary items
- ☐ Utility knife
- ☐ Gummed cloth tape
- ☐ Towel
- ☐ Work gloves
- ☐ Candles
- ☐ Ground sheet
- ☐ String
- ☐ Shoes / slippers
- ☐ Tissues
- ☐ Plastic wrap / aluminum foil
- ☐ Portable toilet

Emergency food
- ☐ Drinking water (three liters per person per day)
- ☐ Cooked packaged rice
- ☐ Crackers/hard biscuits
- ☐ Canned food
- ☐ Seasoning
- ☐ Pre-packaged food
- ☐ Confectionery like chocolate

Clothing
- ☐ Extra clothes and socks
- ☐ Hat
- ☐ Extra underwear
- ☐ Blankets
- ☐ Face mask

It is recommended to store three liters of water per person per day!

Consider your clothes when evacuating!

● Safe and easy-to-move clothes
- Helmet (disaster prevention hood)
- Work gloves and leather gloves
- Backpack
- Wear long-sleeved shirts and long pants
- Comfortable shoes
- Raincoats and warm clothing against rain and wind

Arrangements and preparations for one week

Day 1-2

● Utilize ingredients from refrigerators and freezers

Store ingredients in your refrigerator and store rice, bread, vegetables, frozen foods, etc. in your freezer.

Bread and vegetables can be eaten by natural thawing.

Day 3-7

● Rolling stock method

Rather than stockpiling specially, purchase a little more of what you would usually eat or use, and stockpile (rolling stock) on a daily basis while replenishing only what you eat or use. By doing so, you be prepared without difficulty and without waste due to expiration dates.

● Other things that should be stockpiled
- ○ Canned food (vegetables, fruits, etc.)
- ○ Dried noodles (ramen and pasta)
- ○ Freeze-dried food (soup, etc.)

*It is safer to prepare emergency food with enough for one week using the rolling stock method, etc.
*Prepare drinking and domestic water for one week. Drinking water: three liters per person per day x number of your family members.

To protect your life from floods

Tips for evacuation from floods

Go to a safe place at an early stage before flooding

It is very dangerous to evacuate during a flood. Make sure that you can use information such as that about evacuation before flooding, and take the opportunity to evacuate.

If flooding begins

Do not evacuate after flooding, but protect yourself in a tall building nearby or in a high place at home.

Be aware of the following when evacuating from the flood:

If the water is muddy, it will be difficult to see your feet. If the lid is removed, there is a risk of falling in a manhole or a road gutter.

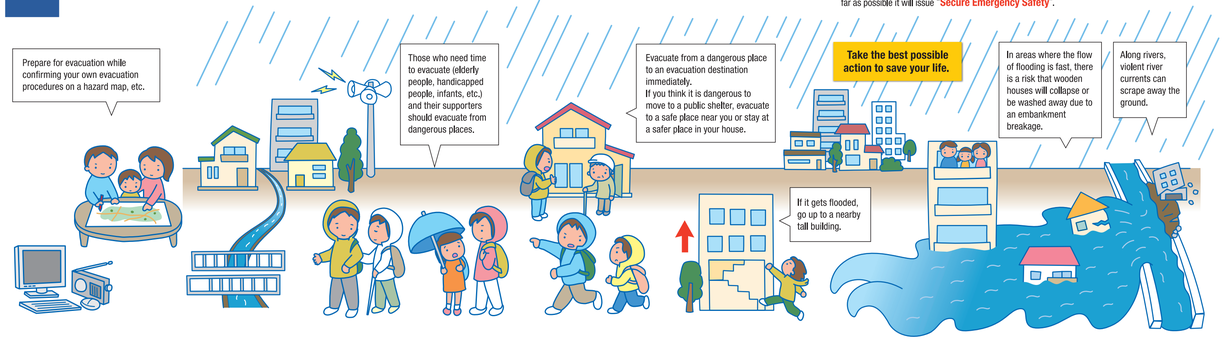

Avoid roads that are lower than the surrounding area and easily flooded, such as underpasses.

In recent years, local heavy rains and torrential rains have caused great damage in various places. With rivers, there is a concern that accidents may occur even downstream where no heavy rains are falling, due to the sudden increase in water caused by heavy rain upstream. For outdoor activities, you must take care not to approach flooded rivers and waterways.

Alert level	If it begins to rain: 1	2	3	4	Be sure to evacuate by "Alert level 4"!: 5
Situation	Weather conditions may deteriorate.	Disasters may occur.	Serious disaster may occur. The City may issue "Evacuation of the Elderly."	The risk of the occurrence of a disaster is increasing. The City will issue an "Evacuation Instruction".	A disaster has already occurred. When the City knows that a disaster has actually occurred, as far as possible it will issue "Secure Emergency Safety".

Pay attention to the meteorological information!

If there is danger due to heavy rain, the Japan Meteorological Agency will announce warnings and advisories for disaster prevention.

State of emergency
When much heavier rain continues
When heavy rain continues
When the rain gets stronger

River disaster management information released by Gifu Prefectural government
URL https://www.kasen.pref.gifu.lg.jp

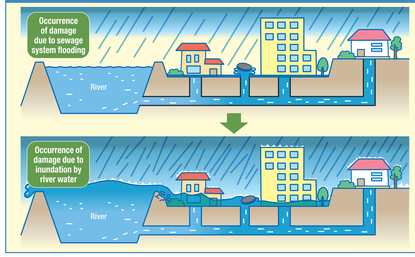

Pay attention to water level information!

- The danger of flooding is imminent. → **The City will decide whether to issue an Evacuation Instruction.** Residents, please **begin evacuation.**
- If rain continues to fall like this, the river will overflow. → **The City will decide whether to issue Start of Evacuation of the Elderly, etc.** Those who need time to evacuate and their supporters should **begin evacuation.**
- The water level is higher than usual. → **Flood control team standby stage**

●River water level information

Difference between damage due to flooding inside an embankment and inundation by river water

If it continues to rain heavily, water will overflow from manholes and road gutters, causing inundation damage (damage due to flooding inside an embankment) on low land. In addition, the water level of rivers requires constant vigilance.

Those in areas that require eviction evacuation need to evacuate immediately. Others need to evacuate to a safe place such as a high place.

If it rains intermittently, in addition to the inundation caused by the water overflowing from rainwater pipes (damage due to flooding inside an embankment), major inundation damage (damage due to inundation by river water) such as overflow of water from rivers and breakage of embankments will occur.

It is necessary to evacuate to a safe place promptly according to evacuation information such as evacuation recommendations.

Designated evacuation shelter

District name	ID	Facility name	Precautions at the time of opening: Flood damage	Precautions at the time of opening: Landslide disaster	Location	Phone

Legend
- First shelter (evacuation shelter opened regardless of the size of the disaster. It is also opened as a voluntary evacuation site depending on weather information such as during a typhoon.)
- Second shelter (a shelter to be opened when the first shelter alone cannot accommodate everyone.)
- Cross-border evacuation facility (available when Tajimi City opens an evacuation shelter.)

Evacuation Area

Facility name	Location
Fureai Park / Midori-no-Oka	1269-38 Hazaki
Roadside Station Canitte	416-1 Kakida
Kani Sports Park	987-4 Sakado
Kani Kisogawa Sagan Park	2691-1 Dota

Note L1: As it is located within an expected inundation area, the safety of the facility should be fully confirmed for evacuation when flood damage is predicted.
Note L2: As it is located within an expected inundation area due to the largest possible rainfall, the safety of the facility should be fully confirmed for evacuation when flood damage is predicted.
Note 1: As it is located in a landslide disaster warning area, the safety of the facility should be fully confirmed for evacuation when a landslide disaster is predicted.
Note 2: As the area around the facility is within a landslide disaster warning area, the safety of the evacuation route should be fully confirmed for evacuation when a landslide disaster is predicted.

To protect your life from landslide disasters

Tips for evacuation from landslide disasters

Evacuate early, paying attention to rain and warning signs

Landslide disasters are a phenomenon in which it is extremely difficult to issue evacuation information. Take the opportunity to evacuate voluntarily even if there is no information.

When it is dangerous to go out due to heavy rain

If you think that it is dangerous to go to an evacuation shelter, move to a safe place such as the second floor or higher of a sturdy building, which is away from slopes, and protect yourself without forcing yourself to evacuate to a shelter.

Be aware of the following when evacuating from a landslide disaster:

If it is expected to continue raining during the night, evacuate before it gets dark.

Choose a road away from slopes and flooded rivers.

If you feel any danger around you, run into a tall and sturdy building.

Alert level	If it begins to rain: 1	2	3	4	Be sure to evacuate by "Alert level 4"!: 5
Situation	Weather conditions may deteriorate.	Disasters may occur.	Serious disaster may occur. The City may issue "Evacuation of the Elderly."	The risk of the occurrence of a disaster is increasing. The City will issue an "Evacuation Instruction".	A disaster has already occurred. When the City knows that a disaster has actually occurred, as far as possible it will issue "Secure Emergency Safety".

Pay attention to the meteorological information!

When there is a risk of landslide disasters, the Japan Meteorological Agency issues Landslide Disaster Emergency Warnings, Urgent Warnings, Warnings and Advisories.

NHK data broadcasting
Press the d button on your remote control.

Gifu landslide disaster warning information portal
URL https://alert.sabo.pref.gifu.lg.jp/web_pub

Be careful when raining!

Be careful when the rainfall is 20 mm or more per hour, or 100 mm or more after the start of rainfall.

Hourly precipitation 20 mm
Heavy rain that makes it difficult to see in front of you even if you use the wipers on your car

Continuous precipitation 100 mm
Even if it just rains lightly, when it continues to rain for a long time the risk of landslide disasters increases.

Advance phenomena of debris flow

The mountain is rumbling or shaking.

It's raining but the river is running low.

The river is muddy and carrying trees with it.

Landslide phenomena

Pebbles fall from the cliff.

Spring water from a cliff increases or becomes muddy.

Spring water stops and there are cracks on the slope.

What is a landslide disaster warning area?

Landslide disaster warning area [Yellow zone]

An area where it is recognized that there is a risk of damage to lives in the event of a landslide disaster.

Landslide disaster special warning area [Red Zone]

Areas in the landslide disaster warning area that may cause damage to buildings and cause significant harm to residents.

If you find a warning sign

It is important to confirm how to share information and to carry out training at a voluntary disaster prevention association, etc.

Evacuation rules should be decided by everyone in your district.
⇒ Evacuation destination, evacuation timing, how to convey information, etc.

→ If you notice any signs that would give a reason for evacuation, share them with everyone.

→ Call out around the neighborhood and evacuate with neighbors.

How to get information

Kani City email distribution service

Emergency email in the event of a disaster "Instant Email Kani"

If you register for the Kani City mail distribution service "Instant Email Kani", you will be notified of disaster prevention information and weather information by e-mail on your mobile phone, smartphone, or PC. Registration is free. (Any cell charges will be borne by the registrant.)

■ Register from your mobile phone or smartphone

Email t-gifu-kani@sg-p.jp

Send an empty email message to the above address. If you scan the QR code, you do not need to enter the address.

The latest version is available on the Kani City website.

Check on TV

■ TV 'd' button (NHK data broadcasting)

On TVs that support data broadcasting, you can check rain and river information by pressing the d button on your remote control.

■ CTK Cable TV Kani

On channel 11, you can watch live images from information cameras installed in Kani City and Mitake Town, and in the event of a typhoon or heavy rain, the water level of the Kani River and precipitation data in the area will also be broadcast.

Check on the radio

This can be used to contact family members and acquaintances when it becomes difficult to connect by phone in the event of a disaster.

FM	FMarara	76.8 MHz	
	FM Gifu	80.0 MHz	
	NHK FM Gifu	83.6 MHz	
AM	Gifu Broadcasting System (GBS)	1431 kHz	
	Tokai Radio Broadcasting	1332 kHz	
	Chubu-Nippon Broadcasting (CBC)	1053 kHz	

Emergency information transmission system utilizing FMrara.

Emergency information audio from radio communications for disaster prevention and administration will be broadcast using FMrara. With this system, you can listen to disaster emergency information in real time on FM radios and smartphones (requires registration of FM++).

■ Registration of "FM++"

You can install uisng the QR code on the right.

You are the one who can decide to evacuate or take action.

Protect lives — **Know about local disasters**
- ○ Use hazard maps to identify dangerous areas such as floods and landslide disasters.

Protect lives — **What you can do now to save lives**
- ○ Check evacuation destination
- ○ Check how to obtain information

To protect yourself from a disaster, you yourself need to take actions such as evacuating. Do not assume that you will be okay, or rely on someone else, or lose the attitude that you must protect your own life.

Escape with everyone in your area, save yourselves with everyone

Help each other — **Get to know everyone in your area**
- ○ Talk to neighbors on a regular basis
- ○ Confirm those who need evacuation assistance
- ○ Consultation on evacuation methods

Help each other — **Call out and evacuate together**
- ○ Call out when evacuating

Even if the danger of a disaster is imminent, it is difficult to decide to evacuate alone. In addition, there will be some people in your area who have difficulty evacuating on their own. Let's confirm evacuation and mutual help not only for yourself but also for everyone in your area.
